VOLUME 7, NUMBER 2

## CARON offers four new 25 cu. ft. chambers

25 cu. ft. chamber

CARON now offers a comprehensive 25 cu. ft. product line with the addition of four new units, including a Refrigerated Incubator, Diurnal Incubator, Insect Growth Chamber and Heated Incubator. Other 25 cu. ft. products introduced earlier this year include an Environmental Chamber and Reach-In CO<sub>2</sub> Incubator.

All 25 cu. ft. products come complete with heavy-duty, factory installed casters and will roll through a standard 34" x 80" doorway without modification. These units come standard with a "tool-less" removable interior, lockable control panel and an ergonomically designed door handle.

## "Earth-friendly" light fixture is CARON's latest accessory

The latest effort from CARON to offer customers even more earth-friendly options is a versatile and ideal lighting solution. **gLux™**, an energy efficient, high output lighting system, is modular, expandable and waterproof.

"We spent a great deal of engineering effort to research a cost effective, high performing and modern lighting design for our customers," said Bob Dotterer, applications engineer.

The new lighting system lasts more than twice as long and is 65 percent brighter than the earlier design and allows customers to perform a wider range of tests. **gLux™** comes standard on 10 and 25 cu. ft. Diurnal Incubators and is purchased as an accessory for all other 10 and 25 cu. ft. units as accessory number LGHT301 or LGHT303.

**gLux™** is the newest addition to CARON's earth-friendly features that lower operating costs and conserve energy, including **gVapor™**, a steam free humidity system and **gROD™**, Refrigeration on Demand. Contact Customer Service for more information.

## New section on CARON's website aids customers in product selection

In an effort to aid customers in selecting the correct product for their application, CARON added a new interactive section to its website. When customers now visit CARON's website, they have the option to click on the "Applications" tab on the menu bar at the top of the screen.

Customers are then prompted to "click through" two or three descriptions of their area of study and testing requirements. Once the appropriate information is gathered, customers are directed to a product. This section of the website is just another step CARON is taking to provide the highest level of customer service. Visit [www.caronproducts.com/66](http://www.caronproducts.com/66) to view the applications section of the website.

## Another great show at ASM, 2009

The American Society for Microbiology (ASM) 109th General Meeting proved to be a valuable show for CARON in Philadelphia, PA. This year, CARON sent two chambers, a Refrigerated CO<sub>2</sub> Incubator and a Heated Incubator. Sales Managers had the chance to speak and meet with many new professionals in the field of microbiology. Visit us at our next show, International Association for Identification (IAI), in Tampa, FL. in August.
