## WVU FORENSIC SCIENCE PROGRAM BENEFITS FROM CARON'S DONATION

CARON recently donated a Model 6105-2 Fingerprint Development Chamber to the Forensic and Investigative Sciences program in the Eberly College of Arts and Sciences at West Virginia University in Morgantown, WV, <http://www.wvu.edu/~forensic/>

The unit had originally been sent to Forensic Facilities Manager & Instructor, Mike Bell, who was evaluating the unit at their crime scene complex. We made the decision to donate the unit when it was moved to their new facility in Oglebay Hall. The students will learn how to use the machine, allowing them to apply what they learn in the classroom to work after they have graduated.

CARON also benefits from the valuable feedback we receive from students and faculty who are using the machine.

## CELLULAR MANUFACTURING IMPLEMENTED AT CARON

In an effort to continue to improve lead times to customers, CARON has implemented Cellular Manufacturing. Workstations have been arranged in an efficient sequence that allows a continuous and smooth movement of inventories and materials to produce products from start to finish in a single process flow, while minimizing transport or waiting time. This process provides higher production efficiencies, reduced inventory levels, optimized use of floor space, and shorter production cycle times.

## NEW REFRIGERATED AND DIURNAL INCUBATOR LITERATURE

CARON's heavy-duty, full temperature range Refrigerated Incubators and Diurnal Incubators were designed for more demanding applications than the typical economy models offered by other manufacturers. For a copy of our new literature, [click here](#).
